SUPPORTING INFORMATION

**Fig. S1.** Surface plot showing the relation between *Toxoplasma* seropositivity and cat possession/raw meat products eating in boys. Individuals who eat raw meat products were 2.6 times more likely to be *Toxoplasma* seropositive (P = 0.0479).

**Fig. S2.** Surface plot showing the relation of *Toxoplasma* seropositivity with cat possession and eating of products from raw meat in girls. The associations were not statistically significant.
